

TREES FOR SURVIVAL™

Children growing our future

Trees for Survival is an environmental education program engaging school aged children in ecology and conservation.

Activities include:

- Teaching the fundamental principles of ecology, horticulture, environmental restoration and human impacts on biodiversity and habitat loss
- Students raising and planting out seedlings on at-risk land as part of their learning
- Revegetating erosion prone land, improving stream flow and water quality and increasing biodiversity
- Helping landowners contribute to better environmental outcomes for New Zealand
- Helping companies and individuals to engage in the environmental restoration process

- We've been around since 1991
- We operate in over 120 schools across New Zealand
- We've planted well over 1.5 million trees.
- We'd love you to get involved!

Here's how to contact us:
